

## **RUBBER WETPOUR PRODUCTS AVAILABLE**

### **RECYCLED RUBBER WETPOUR:**

This is the least expensive option in rubber wetpour, consisting of recycled rubber shred or granules that are coloured on site with a coloured oxide. Limited colours available, the most popular colours selected in this range are Terracotta and Green.

### **PRE-COLOURED RECYCLED RUBBER WETPOUR:**

This option is using the recycled rubber granules, instead of colouring on site, these granules come individually coated with coloured oxide. They are then mixed with the polyurethane on site. More colour options are available with this product, popular colours are again Terracotta and Green along with Blue.

### **EPDM MANUFACTURED GRANULES**

The epdm rubber wetpour is the most expensive and the most premium option available. The rubber granules are manufactured in the colour of your choice. The product is harder wearing and as the surface wears the colour remains. Initially the colour of the granules will have a yellowish cover from the polyurethane that is mixed to bind the surface, this wears quite quickly depending on the usage of the area.
