

# Synthetic Grass & Rubber Surfaces

AUSTRALIA PTY LTD

*Safety, Sporting and Leisure Surfaces*

## TENNIS COURT SURFACING & MAINTENANCE

Synthetic Grass delivers superb playing characteristics giving an even bounce and brilliant response to slice and spin shots, as well as a perfect combination of grip and foot slide.

Synthetic Grass & Rubber Surfaces can provide you with various grades of tennis turf to suit your needs, from a backyard tennis court to a commercial court. Using Synthetic Grass for your tennis court surface also gives you the appearance of natural green turf without the high maintenance costs.

### Tennis Standard (polypropylene)

Synthetic Grass provides a surface that is easy on the joints, while not as expensive as a cushioned surface. The resistant surface provides an optimum playing surface without the cost and time of extreme maintenance effort. Periodic grooming is all that is required to keep the court in top form. Synthetic Grass & Rubber Surfaces offers a 7 year manufacturer's UV degradation warranty.

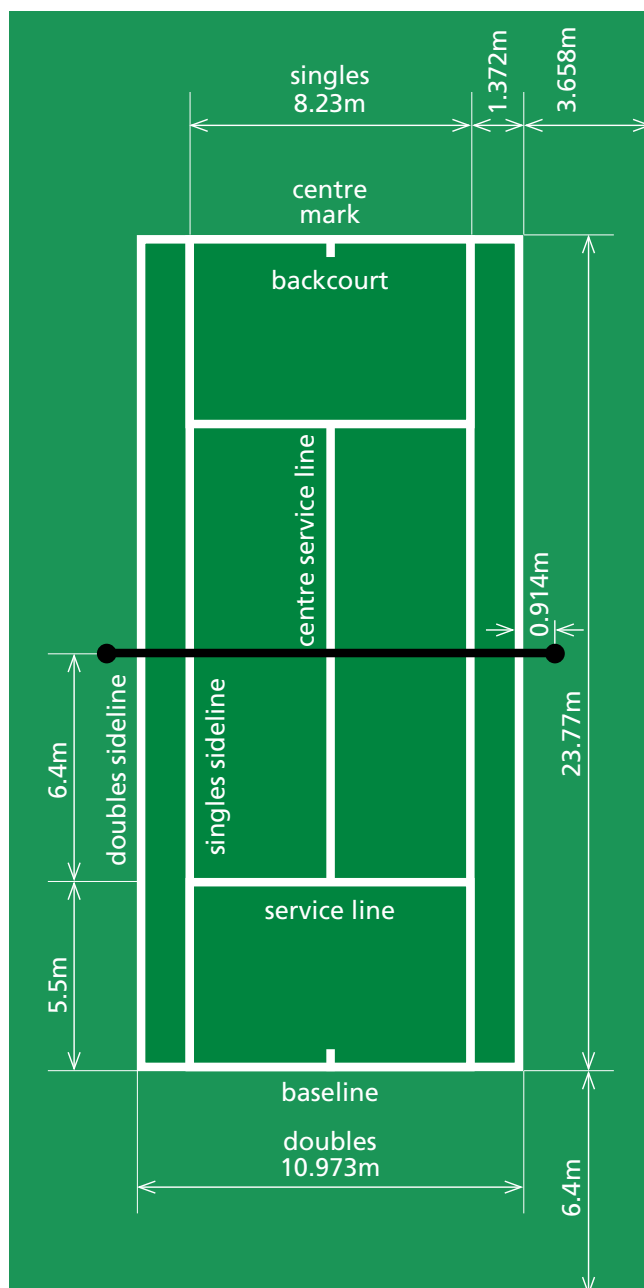

### Tennis Matchplay (polyethylene)

This Synthetic Grass is made from a Polyethylene fibre, whereas the standard Synthetic Grass above, is made from Polypropylene. This fibre system guarantees excellent playing conditions and is exceptionally resistant to matting. In terms of slipping, grazing skin and falls, this is the safest surface one can play on. Matchplay has a 10 year UV degradation warranty, is 50% less abrasive than polypropylene, longer wearing, more resilient, and has improved sand mobility, which helps prevent mould and mildew forming. The fibres feel softer to the touch and the sand doesn't compact into the surface, allowing a more forgiving playing surface.

### Turning old into new

We can also bring your court back to life with a rejuvenating court clean, removing any dirt, mould or mildew that may have built up over time!
